Summary

**Topic:** IMPLEMENTATION OF RISK-ORIENTED APPROACH IN THE IMPLEMENTATION OF THE MUNICIPAL LAND CONTROL AS AN ELEMENT OF THE PUBLIC LAND SUPERVISION SYSTEM AT THE MUNICIPAL LEVEL (on the example of the Kirovsky municipal district of the RNO-Alania)

**Author:** Podolyakina A.N.

**Supervisor:** Associate Professor, Candidate of Historical Sciences, Associate Professor of the Department of Creative Innovation Management and Law D.S. Chekmenev.

**Client organization:** Administration of the Kirovsky municipal district of RNO-Alania

**The relevance** is primarily due to the fact that at the present stage, in the context of reforming the control and supervisory activities of public administration authorities, issues related to the further implementation and improvement of the risk-based approach to the practice of the control function have been actualized.

**The aim of the study** is to summarize the theoretical and practical aspects of introducing a risk-based approach in the implementation of municipal land control and to develop on this basis practice-oriented recommendations aimed at improving this administrative and management practice.

The goal defined in this study predetermined the solution of the following scientific and practical tasks:

- to analyze the control function in the activities of the authorities and management;
- to detail the system of public land supervision in the Russian Federation;
- specify the concept, functions and subjects of municipal land control;
- summarize the theoretical and practical aspects of applying a risk-based approach to management;
- to systematize the features of the use of risk-based approach in the activities of government and management;
- consider the use of a risk-based approach in the implementation of public land surveillance;
- to detail the system of municipal control in the Kirov MR;
- to analyze the subsystem of municipal land control in the Kirovsky municipal district;
- develop recommendations for the implementation of a risk-based approach in the implementation of municipal land control.

**The object of the dissertation research** are administrative and managerial relations arising from the implementation of the control function by the authorities and management.
The subject of the dissertation research are the administrative and managerial processes of introducing a risk-based approach in the implementation of municipal land control.

Hypothesis of the study: the main directions of development of the state control system (supervision) in general and state land supervision in particular objectively determine the need to introduce a risk-based approach in the practice of municipal land control, which is an element of a dynamic public land supervision system, which will ensure, firstly, the compliance of the municipal land control subsystem with the current requirements of Russian legislation and state administration lencheskim doctrines, and, secondly, significantly increase its effectiveness, while ensuring the protection of both natural resources and rights zemleobladateley.

The scientific novelty of the master's dissertation research is to summarize the theoretical and practical aspects of introducing a risk-based approach in the implementation of municipal land control, as well as developing on this basis, practice-oriented recommendations aimed at improving this administrative and management practice.

The main results of the study. In this paper, the municipal control system in the Kirovsky Municipal District was detailed, the subsystem of the municipal land control in the Kirovsky Municipal District was analyzed. On this basis, the master's thesis developed recommendations on the implementation of a risk-based approach in the implementation of municipal land control.

Recommendations. To ensure the implementation of a risk-based approach in the practice of municipal land control, the following actions should be taken.

1. It is necessary to specify the criteria and categories of risk in the system of municipal land control.
2. It is necessary to identify the nomenclature of events that may entail harm to legally protected values.
3. It is necessary to determine the conditions, circumstances and causes that lead to the occurrence of events, the consequence of which may be causing harm.
4. It is necessary to identify risk factors.
5. As a result, it is necessary to develop risk profiles - a combination of conditions for the realization of events, the consequence of the occurrence of which may be causing harm to legally protected values.
