Summary

Subject matter: The improvement of the nature protection work on the regional level (on the materials of Nevinnomyssk complex department of the Ministry of natural resources and environmental protection of Stavropol krai).

Author: Patova M.M.

Supervisor of studies: Kobets M.V., chair of innovatics, management and law.

Customer organization: Nevinnomyssk complex department of the Ministry of natural resources and environmental protection of Stavropol krai.

Topicality of the research: is conditioned by the fact that the processes of the political and socio–economic reconstruction taking place in the RF are breeding new problems in the field of the economy of the environmental management. The state in the face of its plenipotentiary organs is interested in the improvement of the nature protection work so that nature resources are used more or less regularly and systematically.

Objective: of the research is to analyze the specific features of management in the field of the protection of environment and nature resources on the regional level and propose the ways of the improvement of the effectiveness of the measures on the environmental protection on the regional level.

Tasks:

- to analyze the goals, directions tasks and principles of the common state policy pursued in the field of ecology in the RF;
- to examine the state control of nature management and environmental protection: functions, methods, system and responsibilities of the management structures and also the system of decision making on the environmental protection control;
- to study the fundamentals of the improvement of the environmental protection control on the municipal level;
- to analyze the work of Nevinnomyssk complex department of the Ministry of nature protection and environment of Stavropol krai;
to examine the practice of the environmental protection work on the regional level (on the materials of the indicated organization of Stavropol krai);

to propose the main directions of the improvement of the effectiveness of the measures on the environmental protection on the regional level (on the materials of the indicated organization).

**Results of the research:** the provision of the ecological security of the regions of the RF and the constitutional rights of the population to the comfortable environment at present is impossible without the creation of the modern instruments of the regulation of nature management and environmental protection work on the municipal level. The division of the environmental protection work on the federal level between several plenipotentiary organs at present creates obstacles for the implementation of the effective management and control in the field of nature management. The organs of power of the subjects of the RF and particularly the organs of local self-government are insufficiently involved in these processes due to the restriction of their responsibilities.

**Recommendations:**
- the application of the system of ecological monitoring;
- the retention and development of the specially protection natural territories of the Krai significance;
- the organization of the information support of the formation of the ecological culture;
- the elimination of the negative ecological effects of the economic activity;
- the reduction of the negative influence of the emissions from the industrial stationary objects and automobile industry;
- the maintainance of the roadside protective forest plantations;
- the provision of the protection of the territories from the negative influence of water.
