Summary

Subject matter: The problem of the formation of the modern institute of licensing of educational activity as an instrument of public administration (on the example of FSBEI of HPE “PSLU”).

Author: Yakovleva Tatiana Nikolaevna

Supervisor of studies: G.A. Mikheeva, candidate of pedagogical sciences, associate professor, chair of innovatics, management and law.

Customer organization: FSBEI HPE “PSLU”

Topicality of the research: Modern transformations of the system of higher professional education in Russia are coupled to a high degree with the changes in the normative and legal basis and approaches to the execution of its demands. The main process of management of higher school in the new conditions is the licensing of the general educational programs and educational institutions as a whole. The new Regulations on the licensing of educational work of 16.03.2011 №174 set the renewed tasks before higher educational institutions. The transition to the new normative requirements proved to be controversial and required additional efforts both from the controlling organs and from higher educational institutions. The licensing process itself is not controlled by the institution and cannot be corrected however the formation of effective structure and processes of the preparation to licensing within the framework of educational institutions is an adaptive process and is capable to help higher educational institutions to develop harmonically in new conditions. Such problem spots determined the topicality of the theme.

Objective of the research: analysis of the problem of the formation of a modern institute of licensing of educational work as a tool of state management of the system of higher professional education.

Tasks:
- to examine the process of the formation of the institute of higher education in Russia;
- to analyze the legal foundations of the functioning of a higher educational institution in the RF;
- to study the institute of licensing as an instrument of state management of the system of education;
- to analyze the current problems and contradictions of the institute of licensing in the RF;
- to offer the retrospective analysis of the process of licensing in the institution in question.

**Theoretical significance of the work:** is that it specified the theoretical foundations of management of a higher educational institution; made an accurate definition of the essence of state instruments of management as a whole and licensing in particular. Theoretical generalizations and conclusions can be used for the further analysis of the problems of management of a higher educational institution in the RF:

**Practical significance of the work:** Certain principles revealing the key ways of the improvement of the efficiency of the realization of the process of licensing of educational activity can be used by the organization inspected and by the educational institutions of the regional market.

**Results of the research:**
- the system of his/her professional education in Russia went through its evaluation in the aspect of following directions: firstly, the formation and development of Russia scientific and educational structures; secondly, the content component; thirdly, study of the genesis of the institute of higher education in Russia from the point of view of the institutional component;
- to this day the main instruments of state management of the system of higher professional education are the procedures of licensing and accreditation;
- the groundbreaking process within the framework of our research we will consider licensing of educational activity realized by Rosobrnadzor;
- to this day the main problems in the process of licensing and preparation of the documentation to this procedure are caused by the changes in the normative and legal basis, and namely by the training to the execution of the points of the Regulations on licensing of 2011;
the practice of the preparation of the documentation to the licensing procedure by Rosobrnadzor of PSLU is conducted successfully but very often there are breakdowns in the management cycles connected with the organization of the process in the university. These drawbacks are all the more significant the procedure of licensing itself is conducted within the framework of the department of Rosobrnadzor and can be corrected on the university level and therefore it is in the university’s power to organize the process of the preparation of the documentation needed for the licensing procedure in the most effective form.

**Recommendations:**

1. the introduction of the clear-cut algorithm of the organization of the process of the preparation to licensing in the aspect of the interaction of various subdivision of the university;

2. pursuing of complex product policy in the process of decision making on the need for licensing of new EOP;

3. correction of the university price policy in conformity with the requirements of the market relying on the image component of the positioning of the educational institution.
