SUMMARY

Subject matter: Management of municipal purchases in the market conditions (on the example of the local administration of Prokhladny, KBR).

Author: Voron Yulia Hennadievna

Supervisor of studies: Kobysheva Elena Ivanovna, candidate of law, assistant professor, chair of innovaties, management and law

Customer organization: Prokhladny local administration, KBR.

Topicality of the research: the bodies of local government within the limits of their powers solve on their own the problems of the provision of the municipality with all the needs, goods, jobs, services. The key tool in this process in the purchase of goods, jobs, services for the municipal needs. The use of the purchases mechanism fully reveals the essence of such a process as satisfaction of the appropriate municipal needs and enables one to have budgetary means.

Objective of research in a complex scientific and practical analysis of the purchase of goods, jobs, services for the municipal needs on an inter-industrial institute of municipal governance, and also the formulation of the practical recommendation in the sphere under consideration.

The achievement of the objective get required the solution of the following tasks:
- to examine the essence, goals and tasks of the institute of municipal purchases;
- to consider the normativity and legal provision of the system of municipal purchases;
- to determinate the structure of the contracted links of the municipal contract;
- to sum up the practice of management of municipal purchases;
- to conduct the analysis of the organization of the work of the system of municipal purchases in Prokhladny;
- to reveal the problems and direction of the improvement of the mechanism of municipal purchases.

Theoretical significance of the research in that the finding and proposals formulated in regarding the essence of the management-legal mechanism of municipal purchases can be used in the further research into the indicated problem.

Practical significance of the research in possibility of the further use of the results of the research in day-to-day work of the executive bodies of local government which will undoubtedly level to the effective satisfaction of the municipal needs and will enable one to save budgetary means.

Results of the research. A modern system of municipal purchases has the following problems:
- the imperfection of the system of forecasting and planning on the stage of the preparation of the budget which results in the fragmentation of purchases, delay in the terms of sales, overdraft of budgetary means;
- insufficient degree of competition on the market of budgetary purchases;
- grave consequences in the situation of the delivery breakdown;
insufficient qualification of the municipal customers in the field of placement of the municipal order and fairly tough measures of the administrative pressure in their respect;
- insufficient work of municipal customers on the organization of the order placement and, as a result, declaring the sales as not taking place;
- lack of the participants immediately interested in the economy of budget means (the customers have no great interest in this, the economy of the budgetary means serves only an indirect indication of the quality of their work for the administration).

**Recommendations:**

1. To conduct a competition for the development of the regional classifier for the modernization of the site of the municipal purchases of the local district Prokhladny;
2. To solve the problem of the transfer on competitive bases of subcontracts to the sectoral specialized organizations with the purpose of carrying out examinations, control over the execution of the work, etc.
3. To set up a public controlling body on the execution of the contract including members of the Public council for entrepreneurship, particulars of the Public chamber of the municipality, etc. The end of the setting up of the body is observing of law and creation of barriers to corruption in the sphere of placement of municipal orders.
4. To submit a proposal to the Parliament of the KBR on the development and adoption of the republican law on the placement of orders.
5. To work out on the municipal level a common catalog of deals, the catalog of municipal purchases totaling 100 thousand roubles, the catalog of suppliers and confirmation of deals.

So, in a process of the solution of the aforesaid problems and regulation of the proposed initiatives on the improvement of the legal regulation of the sphere of municipal purchases there should improve the mechanism of the effective and rational expenditure of the budgetary means.
