Summary

Subject matter: Management of environmental protection work on the local level (on the example of Kislovodsk administration)

Author: Elerdov David Merabievich

Supervisor of studies: Mai-Boroda Galina Nikolaevna, candidate of economic sciences, head teacher, chair of innovatics, management and law.

Customer organization: Kislovodsk administration

Topicality of the research: The need for the solution of the tasks of the environmental protection work in the Russian Federation is conditioned by the current ecological situation characterized on its territory as acute. The degradation of the surrounding natural environment manifests itself in the acceleration of the desertification process, loss of arable lands, chemical pollution of the soil; reduction in the natural and artificial processes of reforestation; collapse of the ecosystems and disappearance of the wild flora and fauna; the change of the regime of water objects, pollution and eutrophication.

Besides the topicality of the research is caused by the multidirectional processes now under way in Russia of the strengthening of independence of the territories on the regional level concerning the rights of the use, disposal and ownership of natural resources and the need for the integration of the processes of environmental protection on regional level; lack of clear-cut conceptual basis of the development and improvement of the state replan of management of environmental protection on the federal level; the need for making scientifically grounded management decisions on the basis of modeling and forecasting of the ecospheric and anthropogenic processes going on in local administrations.

Objective of the research is the development of the recommendations on the improvement of the system of management of environmental protection work on the example of Kislovodsk administration.
Tasks:
- the determination of the content and principles of environmental protection work;
- the discovery of the administrative and legal mechanisms of management of environmental protection work;
- the examination of the foreign experience of the environmental protection work on the municipal level;
- the conduct of the analysis of the work of the Committee for ecology with Kislovodsk administration;
- the description of the practices of the realization of the environmental protection work by Kislovodsk administration;
- the determination of the main directions of the improvement of the environmental protection work on the example of Kislovodsk administration.

Theoretical and practical significances is that the main principles formulated in the work regarding environmental protection work can be subsequently used for the scientific development of the problem. The results of the work can be used in lectures, reports, seminars, etc.

Practical significance of the research is that the findings and recommendations developed in the course of the work can be used in the process of the formation of the local system of state management of the environmental protection work in Kislovodsk.

Results and recommendations:
- the imperfection of the legislative basis;
- lack of the town planning documentation meeting the demands of the health resort;
- lack of the methodological basis of the ecological standardization;
- the problem of the pollution of the Earth atmosphere, water objects;
- lack of the methodological basis of the estimation of damage caused in the environment.

Recommendations:
1. To freeze without delay and conduct the repeated ecological examination of all the building sites in the zone of narzan formation.

2. To increase the Committee for ecology of the Administration by volunteer public order squads.

3. To limit the entry to the town of the non-local transport.

4. To solve the problem of the roundabout road bypassing Kislovodsk.
