SUMMARY

Author of the Graduation Thesis: Klemenov Nikita Andreevich, the 6th year student of Higher School of Political Administration and Innovative Management.

Supervisor of the Graduation Thesis: Eremina O.S., the Candidate of Historical Science, Associate Professor of the Department of Creative and Innovative Management and Law.

Information about the contracting authority: the Department of the Federal Service for Supervision of Natural Resources in the North Caucasus Federal District.

Topicality of the research: One of the most burning issues in Russia is the protection of the environment, the state of which is on the verge of crisis. In this situation, the issues of scientific validity and practical implementation of environmental control are becoming particularly important.

Objectives of the research: are to examine the practical implementation of the state environmental control (supervision) on the levels of the federal districts and work out some practical recommendations to improve it.

The tasks of the research:

- to study the theoretical and legal principles of the state environmental control (supervision) in the Russian Federation;
- to examine the practical implementation of the state environmental control (supervision) in the North Caucasus Federal District and define the guidelines of its improvement.
The theoretical and practical significance of the research. The findings and recommendations elaborated in the graduation thesis can be applied both by the Department of the Federal Service for Supervision of Natural Resources in the North Caucasus Federal District as well as by other public authorities which carry out the state environmental watchdog.

The results of the research: The analysis of the practical implementation of the control and supervision functions in the sphere of environmental protection in the North Caucasus Federal District shows that an active and systematic work is being carried out in this area. However, the sphere of ecology and environmental protection has not been sufficiently public by far, especially now when the majority of Russian citizens are actively discussing the problems associated with the environment and natural resources management.

Recommendations: In order to create an efficient system of public control in the field of environmental protection, it is necessary to create conditions that will ensure an effective interaction of public organizations and active citizens with state authorities of the Russian Federation. This interaction can be implemented within the creation of the public reception structure on issues in the field of ecology, environmental protection and natural resources management.
